TWO modes can be used to control the lights with AP and STA respectively on the phone or computer.

AP Mode:

Receive the AP Signal though the phone/computer, input the password:12345678, and control it directly.

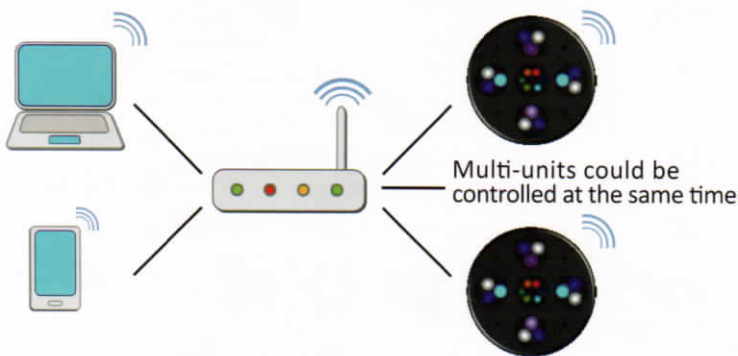

The operation method under AP Mode:

- 1, Open the light, it will show a AP signal named: Wifi-Aqua Led;
- 2, Search the AP signal Wifi-Aqua Led on the phone/computer, choose it and input the password: 12345678.
- 3, Open the APP software, press Wifi-Aqua Led come into the mainly interface, and control the lights directly.

STA Mode:

Use phone/computer and the lights connect the Router respectively, and under the situation that the lights and phone/computer connected the same Router, the function that one APP control multi-units lights at the same time will be come true.

If you would like to enjoy the fantastic multi-units lights will be controlled under ONE APP, please visit this video or scan the below QR code to get the SECRET!!! Thank you. <http://www.coral-box.com>
